Modifications To Fit Nova Suzuki DRZ400 WR Gearbox

Due to change in ratios the Nova gears are different diameters to the standard Suzuki parts. This does not affect most of the gearbox, but in three places a small amount of material needs to be removed to provide clearance. The material in these places should be removed using a small Dremel, hand grinding tool or hand needle file.

1. A small amount of material will need to be removed from the selector fork rod boss in the right crankcase to provide clearance one of the input gears.

2. A small radius of material will need to be removed from the 2 output shaft selector forks to give suitable clearance to the large diameter input gears.
